

Poultry Product

AE Vaccine **(Live)**

Indications

Prevention of avian encephalomyelitis

Directions/Dosages

This vaccine is used for chickens aged 100 days or older. Dissolve 1 vial of the vaccine (for 1,000 chickens) with 4 ml of the included diluent. In the case of individual oral administration, inoculate 0.2 ml of the vaccine per chicken orally to 2-5% of the flock. In the case of administration with drinking water, dilute the vaccine with drinking water corresponding to daily water intake and administer to the entire flock.
